

GainFrame

Brand guide

A short guide for anyone writing or designing GainFrame marketing.

The product in one sentence

GainFrame helps people compare gym progress photos, estimate body fat, track physique changes, and decide what to work on next.

APP VERSION CHECKED: 3.12 | IPHONE

What GainFrame does

Users take a new check-in or import photos they already have. GainFrame lines up the photos, compares them over time, estimates body fat, tracks weight and physique scores, and shows changes across 12 muscle groups.

APP STORE

GainFrame: Gym Progress Photos

Subtitle: AI Physique & Body Fat Tracker

Who uses it

- People who lift regularly and already take progress photos.
- Natural bodybuilders and physique-focused lifters.
- People running a cut, bulk, or recomp.
- People who want more context than scale weight alone gives them.
- People with years of old progress photos in their camera roll.

The problem

Changes happen slowly, photos are hard to compare, and scale weight does not explain whether someone gained muscle, lost fat, or had a noisy week.

What to show

- **Compare progress photos**

Show two check-ins with the same pose. Add dates and one useful change, such as weight, body-fat estimate, or physique score.

- **Show the body read**

GainFrame estimates body fat and compares 12 muscle groups across front and back views. Call the numbers estimates.

- **Show what Coach can use**

Use a real question plus the check-in, training, weight, sleep, recovery, or nutrition data that explains the answer.

- **Bring old photos together**

Show camera-roll photos grouped by pose and date. The user can build a timeline without starting over.

- **End with a next step**

Use a specific action: adjust recovery, watch a weak muscle group, keep calories steady, or repeat the check-in.

Say what the feature does

Name the input, the action, and the result. Keep headlines short.

USE COPY LIKE THIS

- Compare two check-ins side by side.
- Track changes across 12 muscle groups.
- Import old progress photos from your camera roll.
- Ask Coach what changed and what to focus on next.
- See weight, recovery, training, and nutrition next to your photos.

Words lifters already use

Progress photos, check-in, cut, bulk, recomp, macros, body-fat estimate, muscle group, training volume, recovery, and weight trend.

Skip vague fitness copy

Phrases like "revolutionary fitness intelligence," "unlock your potential," and "transform your body with AI" do not explain what GainFrame does.

The user did the training.

GainFrame organizes the photos and data so the change is easier to see.

Logo, colors, and type

PRODUCTION MARK

Keep the mark simple

- Four open corners.
- Black athlete shape.
- Red lower-right corner.
- Clear space around the mark.
- GainFrame is always one word.

Do not redraw, rotate, stretch, outline, or recolor it. Do not put words inside the frame.

TYPE

Outfit for headlines. DM Sans for body copy.

The app uses Apple system type.

Gary, the GainFrame mascot

Use Gary to explain a screen, demonstrate a pose, or react to a result.

NORMAL MARKETING VERSION

Keep these details

- Four separate corner brackets for the head.
- Two floating eyes and an S-shaped nose.
- Red lower-right corner.
- Muscular charcoal body and olive shorts.
- Small gray-brown shoes.

Never turn the head into a filled square. Use the softer neutral body only for a clear beginner or before scene.

Making a new pose

Attach the reference images and use the prompt template in O2_MASCOT_GARY/. The screenshot or data should still be large enough to understand.

Use the right screenshot set

CURRENT FINAL – READY TO USE

Ten App Store screenshots. Keep their order for App Store use.

REVIEW CANDIDATE – APPROVAL NEEDED

This newer set adds Physique Archetype, Nutrition, and Leaderboard. Get approval before replacing the final set.

Check every claim before it goes out

USE

- Body-fat estimate or approximation.
- Fitness tracking app.
- AI-generated Future You projection.
- Photo library stored on the device.
- Selected photos securely processed and not stored on GainFrame servers.

DO NOT PUBLISH

- DEXA-level or medical accuracy claims.
- Guaranteed transformations.
- The only app or most accurate app without current evidence.
- Every photo always stays on the device.
- A price, trial, discount, or free limit that was not checked that day.

Before publishing

- Use the production logo from 01_LOGO/.
- Check whether the screenshot is final or under review.
- Read the claim as a literal promise. Make sure the app does it.
- Check the current price and offer.
- Label AI-generated Future You images.
- Confirm the App Store link and destination page.
